SUMMARY

Senior Full-Stack Engineer with 17+ years of experience. I take web products from idea to production and keep them running: a US telehealth platform (**~6,000 patients**), trade show software for a global medtech company and a route planner with **~50,000 orders**. I work with AI agents every day, which lets me deliver about 3x faster, and I'm comfortable with legacy code. Remote only, B2B.

EXPERIENCE

Senior Full-Stack Engineer · Independent (Own business since 2019 · B2B) since 2018

Long-term clients in parallel, solo or in teams of up to 5. AI-first workflow: agents (Claude Code, Cursor) write most of the code, I plan, review and cover it with automated tests.

Voltiso (Partner · B2B)

- Lead developer of a telehealth platform for a US medical practice, most of it written by me from scratch (Next.js, Firebase, Twilio): **~30 doctors** daily, **~6,000 patients**, **~6,500 consultations**.
- Lead developer of a trade show demo platform for a global medtech company (Next.js, Expo, Firebase): **15 shows a year**, up to **~1,000 users** per show, QR check-in and CRM sync.
- Develop and maintain the Neurosurgeons of New Jersey website; built Expo apps and headless CMS sites (Sanity.io, Storyblok, Strapi), write estimates and onboard new developers.

Own products & direct clients (B2B)

- Designed and built Routes Planner from scratch (Vue.js, Symfony, MySQL, Mapbox): order and delivery route planning used daily by **11 companies**, **~50,000 orders** processed. Leading the SaaS rewrite.
- Built a real-time 3D garage & kennel configurator (React, Three.js) used by **4 steel manufacturers**: live pricing, PDF export with technical drawings and online ordering.
- Shipped LLM features: a support chatbot that knows the company and its system, AI-assisted content and image generation, and a voice assistant that places orders.

Usterka.pl (Full-Stack Developer · B2B) 03/2025-08/2026

- Full-stack work on a home services platform: public website and landing pages, client panel and booking system.

Web Developer · Freelance (Projects for agencies and companies, incl. BluePear) 2009-2018

- Built web apps in Vue.js and React with Three.js, and back ends in Laravel and API Platform (REST, JWT).
- Wrote a case management system with a PDF document generator for a law firm and an order management system with map markers for a steel construction manufacturer (the first version of Routes Planner).
- Created custom WordPress themes and plugins and Bolt CMS websites, and optimised sites for SEO and loading speed.
- Designed logos and responsive layouts.

SKILLS

Frontend & mobile: TypeScript, React, TanStack Start, Next.js, Vue.js, Tailwind CSS, React Native / Expo, Three.js

Backend & platforms: Node.js, Firebase, PostgreSQL, MySQL, Symfony, Laravel, Vercel, AWS, Twilio, Stripe, Mapbox

AI & workflow: Claude Code, Cursor, LLM chatbots & automations, Voice assistants, Automated testing, Legacy modernisation

EDUCATION

Master's degree (MSc), Informatics and Econometrics
Wroclaw University of Economics · 2010-2012

Bachelor's degree (BSc), Informatics and Econometrics
Wroclaw University of Economics · 2007-2010

LANGUAGES

Polish: Native
English: B2+/C1 (professional working proficiency)

INTERESTS

Running: I run parkrun regularly and take part in street and trail races. I also enjoy cooking and follow esports.
